

CSE 421/521 PA0: Thread Priority

The objective of this assignment is to add the ability to set thread priority in Pintos. The assignment can be broken up into the following:

- Read the Reference Guide and Introduction in the Pintos Manual available on UBLearn and get familiar with threads, **building and debugging Pintos**, and **running tests**.
- Read the GitHub Registration Guide on UBLearn, in particular the section “**Working with GitHub on Programming Assignments**”, and clone your assignment repository.
- Find and edit relevant code in `pintos/src/threads/`
- Run `make tests/threads/pa0.result` in your build directory to test your work. PA0’s test is included in your assignment repository on GitHub Classroom. If you are using your own Pintos build, then you can find the test tarball on UBLearn and copy `pa0.c`, `pa0.ck`, `test.c`, `test.h`, and `Make.tests` into `pintos/src/tests/threads/`.
- After passing PA0’s test, answer the quiz on PA0 in UBLearn.

This is a relatively short assignment meant to ease you into Pintos and PA1 and iron out any environment problems. PA0 is an individual assignment, so you won’t have to register teams on GitHub this time.
